

## SONEMA launches a new service offer dedicated to IT and network security

Monaco 18th April 2017

**To assist clients in addressing the new challenges of network and data security, SONEMA is launching a complete range of services to help resolve these issues.**

These days, IT systems are at the heart of all business procedures. Omnipresent and always evolving, they absorb and treat increasingly sensitive information every day. As cornerstones of strategic development for businesses, they are particularly vulnerable to the threat of an attack.

With that in mind, CISO and CSO roles are evolving and becoming more structured to address security issues and use suitable procedures and tools. Faced with the growing complexity of IT systems, they need to transparently monitor and control data and applications whilst optimising investment costs at the same time.

To assist clients with these challenges, SONEMA is launching a IT and network security service offer. The new proposal revolves around 3 essential services:

- **Auditing and consultancy**

SONEMA will put together a comprehensive and accurate diagnosis of the state of the infrastructures in order to offer recommendations for improvement. The diagnosis will take into account all technical, system and organisational aspects.

- **Mail protection**

This fully-managed service protects clients email systems by means of Next-Generation UTM (Unified Threat MGT) firewalls and email gateways coupled with sandboxes, that provides an effective defence against spam and the latest generation of zero-day type viruses.

- **Network protection**

In As-a-Service mode, Network protection safeguards incoming and outgoing internet traffic (web browsing, streaming, Peer2Peer, VPN) as well as mobile user traffic.

To assist clients in their understanding of these problems, SONEMA has also just published a White Paper on IT security, which details the best practices in terms of network and data protection in a clear and pragmatic fashion.

Catherine Delom, SONEMA's Managing Director: « *Security is at the heart of the issue for our clients. Business applications are developing fast, internet use is becoming more and more intensive, while threats and attacks are evolving and increasing. In this type of environment, SONEMA has made security a priority, to allow our clients to focus on their goals. This new offer perfectly illustrates our commitment to supporting our customers when faced with this type of problem and offering them tailor-made solutions.* »
