(SandBox Option)

Efficiency and performance

- Reduced traffic congestion by deleting spam mails before they reach the mailbox
- Minimised false-positive results
- The latest detection/remediation techniques

A managed service

- Scalable service levels
- Simplified invoicing based on the number of mailboxes
- Analytical reporting for mail traffic

MAIL PROTECTION SERVICE

Email has become the primary attack vector used by cyber criminals. Today, *91% of cyberattacks start with an email** The standard anti-spam tools included with your email or your firewall are no longer adequate protection against these threats.

Based at our Tier III-design datacentre in Frejus, France, the **Mail Protection** offer enables advanced filtering and analysis of incoming emails via a proxy mail server.

Two modules are available: proxy **SecureMail** complimented by **Sandbox** which enables advanced protection from sophisticated attacks.
